SEND SPOOLED FILE TO EMAIL (NETSPLF)

OVERVIEW

The Send Spooled File to Email (NETSPLF) command enables the AS/400 user to attach a spooled file within an email to multiple recipients (up to 10). The total size of mail & attachment is limited to 1-Mb (or whatever the number the mail server allows). NETSPLF interfaces with Send Distribution (SNDDST). Here are some features of the NETSPLF command:

✓ Allow 10 mail recipients.

✓ Only attaches spooled file for output queues the user is authorized to. (E.g. if output queue is PAYROLL and user is not authorized to PAYROLL, the spooled file within the output queue cannot be sent).

✓ Can convert spooled file in text format, web-page format, MS-Word format or PDF format.

The following parameters are used:

```
                  Send Spooled File to Email (NETSPLF)

 Type choices, press Enter.

 Spooled file . . . . . . . . . .   _____     Name
 Job name . . . . . . . . . . . .   *              Name, *
   User name  . . . . . . . . . .   _____     Name
   Job number . . . . . . . . . .   _____         000000-999999
 Spool file number  . . . . . . .   *ONLY          1-9999, *ONLY, *LAST
 Spool attachment type  . . . . .   *TXT           *TXT, *HTM, *DOC, *PDF
 Email message  . . . . . . . . .   'Please review attached document'
                                   _____
                                   _____
                                   _____
 Internet email address . . . . .  _____
                                   _____
 _____
                   + for more values  _____
                                      _____
 _____
                                                                 Bottom

```

NETSPLF COMMAND

FILE

   AS/400 Spooled file name to be sent as an attachment within the email.

JOB

   AS/400 Job that created the spooled file.

SPLNBR

   The number of the spooled file, from the job whose spool file will be attached.

TYPE

   The resulting attachment type for the email. Type of attachment can be text (*TXT), web-
   page (*HTM), MS-Word (*DOC) format or Acrobat PDF (*PDF) format.

MSG

   Email message sent to the recipients.

EMAIL

The internet email address of one or more users to whom the email is being sent. Up to 10 recipients may be entered.
