INTRODUCTION

Background

On November 16, 1988, the President of the United States signed into law the Generic Animal Drug and Patent Restoration Act (GADPTRA). Among its major provisions, the Act extends eligibility for submission of Abbreviated New Animal Drug Applications (ANADAs) to all animal drug products approved for safety and effectiveness under the Federal Food, Drug, and Cosmetic Act.

The Act also requires that each sponsor of an approved animal drug product submit to the FDA certain information regarding patents held for the animal drug or its method of use. The Act requires that this information, as well as a list of all animal drug products approved for safety and effectiveness, be made available to the public. This list must be updated monthly under the provisions of the Act.

This publication, which is known as the "Green Book", was first published in January of 1989. Updates have been added monthly since then. The list is published in its entirety each January.

Sections

There are eight sections in the publication. The first lists approved drug products; the two subsections being sorted by tradename and then by NADA number. The second section lists active ingredients and each approved product containing that active ingredient. Sections I and II will not contain products voluntarily withdrawn by their sponsor or products that have not been DESI finalized. The third section lists patent information as provided by the sponsors of approved animal drug products. Products voluntarily withdrawn will appear in this section if they have unexpired patents.

The five remaining sections provide additional information not specifically required by the Act, but may be useful to potential sponsors of ANADAs. Section IV lists exclusivity periods granted for new uses or claims approved subsequent to enactment of GADPTRA. Section V lists any approved products that are currently the subject of a Notice of Hearing and thus may not be used as a basis of an ANADA. Section VI lists animal drug products whose approval has been voluntarily withdrawn by their sponsors since GADPTRA was enacted. Products listed in this section may be used as a basis of an ANADA if their withdrawal was not for safety or effectiveness reasons. Section VII lists the actions on ANADA suitability petitions that have been received by the FDA since the enactment of GADPTRA. Section VIII is reserved for monthly updates.

Key to using this book

Individual products (NADAs and ANADAs) may have one or more tradenames associated with that product. Section 1.1 lists all of the individual tradenames and corresponding NADA or ANADA. In all other sections in the book the tradename will be listed as a single (concatinated) tradename, with the separate tradenames joined by a semicolon. Some tradenames are actually **combinations** of tradenames from other approved products; these will have a ' / ' between the separate components of that one tradename; or in some cases the separate components will be divided by a ' + '. A product may also have multiple combined tradename(s).

PATENT INFORMATION

Section 3.0

Under the Federal, Food, and Cosmetic Act, sponsors of approved animal drug products are required to report to the FDA information on certain patents pertaining to new animal drug products. The following is the list of patents that have not expired as of January 1, 2000 but may or may not have been voluntarily withdrawn. The list has been provided by sponsors of approved NADAs and has been edited and updated by the FDA. This information is provided as an aid to sponsors of ANADAs in determining the patent status of approved animal drug products. Persons considering submitting an ANADA to the FDA are advised not to rely solely upon the patent information published in this book in determining the patent status of a listed new animal drug.

Section IV

Exclusivity Periods

EXCLUSIVITY PERIODS

Section 4.0

Under the Federal Food, Drug and Cosmetic Act, the approval of a New Animal Drug Application (NADA), or of a supplemental NADA, may in some cases provide the sponsor of the application with a period of exclusivity, as defined in the Act. This exclusivity period allows the sponsor to market the approved product for either 3 or 5 years, during which time no generic copy may be approved (in the case of 3-year exclusivity), or no generic application may be submitted (in the case of 5-year exclusivity). The following exclusivity periods have been granted by the FDA and have not expired as of December 31, 1999. Some of the 3-year exclusivity periods are granted for the product, as approved in an original NADA. Others apply only to certain conditions of use of the approved product, as approved in a supplemental application. Persons considering submitting an ANADA to the FDA must determine which conditions of use for an approved product are protected by exclusivity. In order to assist in making this determination, the column entitled "Greenbook Supplement" is included in this table. This column refers to the date of the Monthly Update (Section VIII) of the "FDA Approved Animal Drug Products" listing, in which the original or supplemental NADA approval was described.

SUITABILITY PETITION ACTIONS

1991, con't		
91P-0285/CP1 Pfizer, Inc.	Request that FDA require bioequivalence testing of generic oxytetracycline animal drug products referencing Pfizer's Liguamycin LA-200. The petition also requested that FDA deny Fermenta Animal Health Company's ANADA for an oxytetracycline product. Pfizer pointed out that the Fermenta ANADA does not contain tissue residue studies for calculation of a withdrawal period. *Note: Six points raised in the petition were addressed. The Agency agreed that demonstration of in vivo bioequivalence between the Fermenta and Pfizer formulations is essential to the approval of Fermenta's ANADA. The Agency did not agree that tissue residue studies necessarily would be required. The pharmacokinetic profiles of both formulations will be evaluated to determine bioequivalence and could be used in lieu of a tissue residue study in assigning a withdrawal period. The Agency agreed that bioequivalence studies would be required in more than one species but it does not intend to require demonstration of bioequivalence in all classes of animals within a species. Bioequivalence studies in the Fermenta ANADA will be required in swine and in one class of adult ruminating nonlactating cattle. The Agency agreed that the Fermenta product, although a different strength, must be labeled to deliver the same dose of oxytetracycline base to the animal. The Agency retracted a statement made in approving the Fermenta suitability petition requesting that the generic product be labeled at 9.3 mg/lb of body weight. Fermenta will be instructed to label their generic product at 9 mg/lb of body weight. The Agency pointed out that although different salts of oxytetracycline are used in the manufacture of the two products, the finished form of active ingredient in both cases is magnesium chelated oxytetracycline. Some technical issues regarding labeling and notification of the patent holder were also addressed in the Agency's response.	See note* 12/02/1991
